

COMPLETE WORKING GUIDE

Run your whole transport business from one screen.

Sarva Express OS handles your trips, fleet, billing, expenses, payroll and team — live, shared across everyone, and usable from any phone or computer. This guide explains every feature and exactly what each person on your team should do.

sarvaexpress-app.web.app

4 roles: Owner · Manager · Supervisor · Accountant

Works on mobile & desktop

Getting started & signing in

Everyone on your team gets their own login. Nothing installs — you just open the website.

- 1 Open sarvaexpress-app.web.app on any phone or computer browser. Add it to your home screen for one-tap access.
- 2 Enter your **email** and **password** and press **Sign in**.
- 3 **First time only:** use the temporary password your owner shared, then you'll be asked to **set your own password**. Choose one only you know — from then on that's your password.

The owner account is the first account — it's your master login (your email + the password you set). From it you create everyone else. Forgot your password? Ask another owner/manager to remove and re-invite you, or reach us to reset it.

The four roles

Each person is one of four roles. The role decides what they can see and do. You choose it when you invite them (and can change it any time).

■ Owner — that's you

The boss. Sees everything, isn't time-tracked, and runs the whole show. You mostly watch and direct while your team does the work.

- Sees **every trip** and which supervisor handles it
- Creates the team & sets each person's permissions
- Assigns tasks with deadlines, gets alerts when done/overdue
- Full access to money, reports and exports

■ Manager

Your right hand. Same full access as the owner — use this for a partner or office head who helps run everything.

- Full access to all pages & all trips
- Can add team members and assign tasks
- Handy when you're not around

■ Supervisor

Handles routes on the ground. Each supervisor manages **their own** trips and drivers and updates status as the trip moves.

- Creates & runs **only their own** trips and tours
- Updates live status, sends WhatsApp to drivers
- Raises money requests to the accountant
- Cannot see other supervisors' routes

■ Accountant

Runs the money side. Billing, expenses, payroll and reports — and approves the requests your supervisors raise.

- Invoices & GST, expenses, payroll, reports
- Approves / rejects advance & expense requests
- Exports data to Excel

Who sees what — the access model

Two pages are **private per person**: **Trips & Routes** and **Amazon Tours**. A supervisor sees only their own; you (owner/manager) see everyone's. Everything else in the list below is **shared** — anyone you give the page to sees the same data.

PAGE	OWNER	MANAGER	SUPERVISOR	ACCOUNTANT
Trips & Routes	All	All	Own only	—
Amazon Tours	All	All	Own only	—

PAGE	OWNER	MANAGER	SUPERVISOR	ACCOUNTANT
Trucks & Drivers	Shared	Shared	Shared	optional
Customers	Shared	Shared	Shared	Shared
Truck Owners	Shared	Shared	Shared	Shared
Invoices · Expenses · Payroll · Reports	Yes	Yes	—	Yes
WhatsApp · Team Chat · Data Export	Yes	Yes	optional	optional
Team & Roles	Yes	Yes	—	—

“optional” = you decide per person with the page toggles when inviting them.

Building your team & creating logins

Owner

Manager

You can create as many users as you need. Each one gets their own email login and only the pages you allow.

- 1 Go to **Team & Roles** in the sidebar and press **+ Add member**.
- 2 Enter their **name**, **phone** and **email**, and pick a **role** (Manager / Supervisor / Accountant).
- 3 For supervisors & accountants, tick exactly which **pages** they can open. Owners & managers automatically get everything.
- 4 Press **Create account**. The app shows a **one-time temporary password** — copy it and send it to that person over WhatsApp or in person.
- 5 They open the website, sign in with that email + temp password, and set their own password. Done — they're on the team.

On the Team page each person shows their photo, role, phone, the pages they can access, and their live status for today. Tap **Edit access** to change a role or page permissions later, **Assign task** to give them a job, or **Today** to see what they've done.

Profiles & photos. Everyone can open **My profile** (top-right menu) to add their photo, phone and change their password. Their photo then shows across the app so you always know who's who.

Your dashboard (Overview)

The Overview changes depending on who's logged in.

Owner & Manager — the “Team mix”

At the top you see every teammate: whether they're **online, on break or offline**, how many tasks they have, and any **overdue task in red**. Press  **+ Assign task** to hand someone a job with a deadline. Below that are your live business numbers — revenue, profit, outstanding, active trips, trip status, fleet, document alerts.

Alerts with sound. When a teammate finishes a task or a deadline passes, you get a pop-up notification and a chime. Tip: the sound only starts after you've clicked once on the page (a browser rule) — after that it just works. The  bell top-right keeps your history; the speaker icon there toggles the sound.

Supervisor & Accountant — “Your day”

Workers see their own strip: **the tasks assigned to them** each with a **timer** (Start / Pause / Done), a **Take a break** button, and a **Work log** where they type what they did as they go (“Collected POD from Bharat Steels”). Simply having the app open counts as being at work — the owner sees your active hours automatically.

Trips & Routes

Owner sees all

Manager sees all

Supervisor: own routes

Every consignment is a trip. Each trip gets an automatic **VR ID** and **LR number**, a route, a driver & vehicle, and a live status you update as it moves.

Creating a trip

- 1 Open **Trips & Routes** and press **+ New trip**.
- 2 Choose **Single point** (pickup → drop) or **Multiple points** to add as many stops as you like (pickup, in-between points, final drop).
- 3 Type each location. Start typing and **saved points suggest themselves** (type "JP" → "JP Nagar"); new places are remembered for next time. Paste a **Google Maps link** under each point so the driver can tap to navigate.
- 4 Pick the **driver** and **vehicle**. Not added yet? Press **+ New** right there to add a driver or customer without leaving the form.
- 5 Choose the **customer** (optional), fill material, weight and freight. As owner/manager you can also set **Handled by** — which supervisor owns this route.
- 6 Press **Create trip**. The VR ID & LR are stamped automatically.

Updating an ongoing trip — one tap

Each trip is a card. The green button always shows the **next step** — press it to advance: **Heading to pickup → At pickup → each point → At drop → Finish**. On **Finish** you add a short **remark** ("delivered fine", "police checkpoint delay", "short payment"). That's the whole status update — one tap per stage.

Live tracking timeline

Press **Track** on any trip to open the tracking view: a moving 🚚 along a progress bar and a step-by-step timeline. Each stop shows its **Open in Google Maps** link. The person in charge marks each stage as the driver reaches it, so anyone looking knows exactly where the trip is.

🔑 **Four supervisors, four routes.** Give the Trips page to several supervisors and each handles their own routes — **they can't see each other's trips**. You (owner/manager) see everyone's, with a "handled by" label on every trip showing which supervisor is running it.

06 TALK TO DRIVERS & CUSTOMERS

WhatsApp messages

Anyone with the page

The app writes your WhatsApp messages for you — you just pick the trip and send.

- 1 Open **WhatsApp** and pick the trip from the dropdown (or search by VR / LR / route / driver).
- 2 Three ready messages appear at once: **Trip** → **driver** (with the Google Maps links for each stop), **Dispatch note** → **customer**, and **Payment reminder** → **customer**.
- 3 Press **Open in WhatsApp** to launch WhatsApp with the number and message already filled — just hit send. Or press **Copy** to paste it anywhere.

🗨 **Why it helps:** the driver gets the full route with tappable map links, the customer gets a clean dispatch note, and payment reminders go out in seconds — all in your company's voice, no typing.

Expenses, invoices & payroll

Accountant

Owner

Manager

Expenses & Fuel

Press **+ Add expense**. Mark whether it's for **a trip**, the **office**, or **general**. Pick a category, or choose **"Other"** to type a new category — it's saved for next time. Log diesel under **Fuel log** and the app auto-flags **fuel leakage** (diesel bought vs. distance ÷ mileage).

Raising a request to the accountant

Anyone can press **Raise request** for an advance or expense — a diesel advance for a driver, a puncture repair, etc. It appears in the **Requests to accountant** list, where the accountant presses **Approve** or **Reject**. The pending count shows on the Expenses page so nothing is missed.

Invoices

Under **Invoices**, raise a **GST invoice** for a customer (base + GST calculated for you), then mark it **Paid** when the money comes in. Outstanding invoices show on the dashboard so you always know who owes you.

Payroll — explained simply

Payroll is paying your drivers & staff. For each person: **Base salary + Bhatta** (per-trip allowance) – **Deductions** (advances, fines) = **Net pay**. Press **Run payroll** to mark the cycle paid — it's safe to press twice, it never double-pays. Past cycles show under "Recent payouts".

Customers, truck owners & fleet

Shared by the whole team

Customers

Your clients and their rate contracts. Add a customer here, or on the fly while creating a trip. Create and **print an agreement** for any customer in one step.

Truck Owners (market vehicles)

When you use other transporters' trucks, add the owner under **Truck Owners**, track what you owe them, record payments, and generate their **attachment agreement** or trial **LOI**.

Trucks & Drivers

Your fleet and drivers. Store each driver's **Aadhaar & licence** and each truck's **RC, insurance & fitness** — including **photos of the documents**. The dashboard warns you before any document expires.

Document photos. Upload a photo of any document; tap it to **preview it full-screen** first, with a Download button — it no longer just downloads blindly. Great for showing an RC or licence at a checkpoint.

Reports & data export

Accountant

Owner

Manager

Reports show revenue, profit, and your best vehicles & routes. Data Export turns any list into an Excel sheet with one click.

- 1 Open **Data Export**.
- 2 Press **Download** next to any dataset — Trips, Invoices, Expenses, Fuel, Customers, Payables, Payroll.
- 3 The Excel opens in your Downloads. The **Trips sheet includes the VR ID and “Handled by”** column, so you can see which supervisor ran each route.

Use exports for your CA, GST filing, or to share numbers with a partner.

Tasks, timers & team activity

Owner

Manager

Hand out jobs, set deadlines, and see what everyone is doing — without calling anyone.

- **Assign a task** from the dashboard or a person's card. Add a **finish-by time**. It lands at the top of their Overview with a stopwatch.
- **They work it:** Start (timer runs) → Pause → Done. If the deadline passes, it turns **red** for them and for you, and you get an alert + chime.
- **Work log:** as they finish jobs they jot what they did. You see it under their **Today**.
- **Activity:** opening the app = being at work. Their active hours (from-to) and “on break” status show on the Team page. **The owner is not tracked** — only the team is.

Documents & printing

Every document opens as a clean **preview** first, with a button to print or save as PDF — it never downloads blindly.

- **Lorry Receipt (LR)** — from any trip, press **LR**.
- **Tax invoice** — from the Invoices page.
- **Agreements & LOI** — from Customers and Truck Owners.
- **Document photos** — tap to preview full-screen with a download option.

On the preview, press **Print / Save as PDF** and choose “Save as PDF” in your browser’s print dialog to keep a copy or send it on WhatsApp/email.

Daily playbook — what each person does

■ As the Owner

- Glance at **Team mix** — who’s online, any overdue in red
- Assign the day’s tasks with deadlines
- Scan revenue, outstanding & document alerts
- Check each supervisor’s routes & “Today” log
- Let alerts tell you when things finish

■ As a Manager

- Everything the owner does, on their behalf
- Add or remove team members, fix permissions
- Keep trips, billing & fleet moving

■ As a Supervisor

- Create your trips with points & map links
- WhatsApp the route to your driver
- Update status one tap per stage as it moves
- Add a remark on finish; raise advances when needed
- Log what you did in your Work log

■ As the Accountant

- Raise invoices; mark payments received
- Approve/reject the team’s requests
- Log expenses & fuel; watch leakage
- Run payroll each cycle
- Export sheets for the CA & GST

Tips & FAQ

- **It works on the phone.** Open the site, then "Add to Home screen" for an app-like icon.
- **Everything is live & shared.** A trip a supervisor creates shows on your screen instantly — you don't pass files around.
- **Notification sound not playing?** Click anywhere on the page once (a browser rule); after that the chime works. Toggle it with the speaker icon in the 🔔 bell.
- **Change your password** any time in **My profile** (top-right).
- **Create as many users as you want** — there's no limit. Give each only the pages they need.
- **Wrong person sees a page?** Owner/Manager → Team & Roles → Edit access → untick the page.
